DETAILED ACTION

Response to Amendment

1. The Preliminary Amendment filed on August 31, 2001 has been placed of record and entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 4-22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Koizumi et al. (Koizumi; 5,075,697; cited and applied for the first time).

Refer specifically to FIGs. 1, 2, 5, and 6 and to the Abstract of Koizumi; however, the entire patent to Koizumi is directed to teaching the claimed methods of modulating the polarization of an electromagnetic wave providing two channels for transmission (plainly shown by Koizumi). For example, with respect to the phase quadrature, refer to column 4, line 6 to column 5, line 5.

4. Claims 4-22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hodgkinson et al. (Hodgkinson; 5,107,358; cited and applied for the first time).

The entire patent to Hodgkinson also plainly teaches the claimed methods of modulating the polarization of an electromagnetic wave providing two channels for transmission. Refer to the Abstract; Figs. 1a-1c; column 2, lines 1 – 39; and column 3, lines 35 –45.

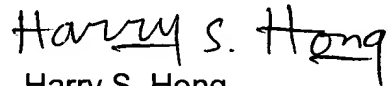

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kuecken teaches a system for polarization diversity modulation. Drabowitch et al. teach a device and method for data transmission and /or acquisition using two cross polarizations of an electromagnetic wave and magnetic recording device. Perpall et al. teach a multiplexing system combining a plurality of electromagnetic signals to propagate along a common path via polarization modulation. Barrett teaches a polarization-rotation modulated, spread polarization-rotation, wide-bandwidth radio-wave communications system.
